

London South Bank University Willmott Dixon | London

Opening its doors in July 2022, the new London South Bank University transformation was ready for action. LSBU has transformed its London Road campus by modernising its facilities, learning spaces and technology to serve the needs of generations of students, staff and the wider community.

Brief: LSBU required a complete washroom solution, covering everything from WCs and showers to changing rooms. They needed products that could endure a busy university setting and stand the test of time.

Solution: TBS Amwell Splash cubicles were the ideal choice, offering durable, impact, and water-resistant solutions suitable for showers, changing areas, and WCs. These were complemented by Aquasafe Lockers and Aquabench seating to complete the changing rooms.

Splash cubicles:

- Made from impact and water-resistant Solid Grade Laminate, these cubicles are built to last.
- With over 30 laminate colours to choose from LSBU chose Woodland, a beautiful wood grain effect laminate, a great cost saving alternative to Real Wood Veneer.

Aquasafe lockers and Aquabench seating:

- Hard-wearing and water-resistant Solid Grade Laminate carcass and doors with various lock, size and configuration options
- Aquabench delivers durable changing room benches and practical seating solutions, offering flexible styles and seating options.

PDQ Panel & Frame:

- Arrives on-site pre-assembled for easy installation, cutting labour time and costs by 50% compared to a traditional timber frame.
- Various panel splits available to suit WCs, urinals and WHBs
- If supplied in SGL, the panels are fully water and impact-resistant, and for extra safety, optional anti-vandal locks are available.
